ABSTRACT

This report is the inaugural edition of a triennial profile of the condition of North Carolina's youngest population (age birth through 5 years), the target population for the state's "Smart Start" program. Part 1 of the report details the needs of young children in the state by means of state and county-by-county data. Part 2 presents resources such as a history and description of the Smart Start program, a list of Smart Start Partnerships by year, and county resources. The final section defines and explains the data presented. The data are presented in three areas--early education, health, and economics and family structure -- with key indicators in each. The indicators are: (1) child care arrangements; (2) enrollment of child care centers; (3) services for children with developmental disabilities; (4) publicly subsidized child care; (5) Head Start; (6) early education program accreditation; (7) child care provider training; (8) healthy birth and early childhood; (9) access to health care; (10) safety; (11) family income; (12) family poverty and assistance; (13) family structure; (14) general demographic data; (15) child care provider statistics; (16) family income distribution; (17) immunizations; (18) child deaths; and (19) leading causes of death for children over 1 year old. March 22, 1999

Greetings!

I am pleased to present to you the 1998 Smart Start Needs and Resources Assessment. This year's project was requested and funded by the 1997 Session of the N.C. General Assembly. Assessing the Needs and Resources for North Carolina's Smart Start Population is the inaugural edition of a triennial profile that details the condition of North Carolina's youngest population. The profile brings together the best available data on the health, economic, and social well-being of children ages birth through five.

data also reveal that Smart Start is making a difference. Through Smart Start, the quality of child care is improving and parents are retaining This year's profile provides facts and figures from a wide array of early childhood indicators. The data reveal a continuing decline in our infant mortality rate, an almost non-existent occurrence of vaccine-preventable illnesses, and higher incomes for families in our state. The their jobs because they are receiving help to cover the cost of care.

make a difference. Or, allow the facts to spur a discussion in your community. Each response will ensure a brighter and more secure future Review the information in Assessing the Needs and Resources for North Carolina's Smart Start Population and identify where you can Sincerely, for the State's children.

he North Carolina General Assembly mandated a "Smart Start needs and resources assessment," and appropriated funds to the NC Division of Child Development (DCD) to arrange and oversee this project. Through a contract with DCD, the North Carolina Child Advocacy Institute has produced this report detailing the best and most currently available state-level and county-level data about conditions affecting the well-being of North Carolina's young children. Since Smart Start potentially benefits all children in North Carolina from birth through five, this population is the focus of the information in this volume.

Summary of Contents

Overview — A review of the data sections and subsequent indicators presented in the book. The data are divided into three sections: 1) early education 2) health 3) economics and family structure. Within each of these categories we have identified the key indicators that measure what is happening with children ages birth through five. Please see the end of the Overview for notations.

Part I: Needs

- North Carolina State Level Data This section provides statelevel data on 106 different indicators about early education, health, and economics and family structure. Some of these data, such as the number of calls to the poison control center, immunization rate, income distribution, and causes of death, are available only on the state level.
- County-by-county data There are data in this section for each of North Carolina's 100 counties using 96 different indicators in the three categories: early education; health; economics and family structure. For easy comparison, the state level data appear in a column next to the county data.

Part II: Resources

- **History and Description of Smart Start** This section contains the history of the legislative creation and subsequent development of Smart Start. The program objectives, community collaboration, and the evaluative component of this unique public/private partnership are described as well.
- Smart Start Partnerships by Year A one-page data sheet for each of the Smart Start Partnerships includes budget figures, core services, impact numbers, and a list of community partners.
- County Resources A sampling of local resources for families in each county is brought together in this section. While not an exhaustive list, there is a general overview of social services, literacy, health, and child care resources and services available in each of North Carolina's 100 counties.

Data Definitions and Explanations — This section presents background discussion of the data presented, as well as the sources and the precise definitions of all indicators presented. While this report is, fundamentally, a data book, we want it to be used and readily understood by all constituencies who read it; not just statisticians.

The behalf falls upon the NC adults who most affect each child. impact upon our state's youngest children.

Early Childhood Education

early learning situations have fewer problems in school and fewer child to grow into a happy, productive adult. Furthermore, it has Early education is one of the best chances to influence a child's education (including high quality child care) is linked to school search shows that a child's brain is developing from the minute ment. 1 The cognitive and social foundation built in these years achievement and the development of social skills that enable a influences a lifetime of learning and skill building. Good early been shown that low-income children exposed to high quality earning skills and intellectual development. Recent brain rene/she is born and that the first few years of life are critical windows of opportunity to positively influence that developinteractions with the juvenile and adult justice system.²

The majority of North Carolina parents, including single parents, being exposed to early learning environments in state regulated involved in some type of care arrangement while their parents work. In North Carolina, approximately 213,000 children are work outside the home. Correspondingly, many children are child care every day.

In North Carolina, approximately 213,000 children are being exposed to early learning environments in state regulated child care eveny day.

Over 70% of the young children receiving child care subsidies are tell more about the child care system delivery and capacity than Instead, these indicators are primarily descriptive in nature and of licenses and what type of care parents receiving subsidies for child care centers and homes are operating with different types andscape of early education programs for the children of North regulated child care are enrolled in licensed centers, and 28.3% What Is KNOWN About Early Education in North Carolina this report are not direct indicators of child well-being in that 213,000 children are receiving state-regulated care, how many The indicators presented under the early education section of are enrolled in centers with the highest license rating, "AA." schools and by the North Carolina Department of Health and about effectiveness of care. As a whole, these data give the children with developmental disabilities served in the public child care are selecting. We also know the number of young Human Services. Currently, 89% of NC's children who are in operation of various types of child care. It is known where Carolina. Primarily, there is information on utilization and they do not measure the outcomes of child care programs. enrolled in licensed centers.

As this report is going to press, changes are being proposed in the NC child care licensing system that will give incentives and rewards to child care providers who voluntarily meet higher standards of care and training. Under the new five-level rating system, child care centers will receive ratings from one to five stars. Those programs that meet minimum standards will earn one star, while those that voluntarily meet higher standards will earn between two and five stars. The ratings are based on three components: 1) program standards including staff/child ratios, environment and personnel policies; 2) education level of staff; and 3) compliance history with state guidelines.

Assessing the Needs and Resources for North Carolina's Smart Start Population also presents data that reveal that both Smart Start and T.E.A.C.H (Teacher Education and Compensation Helps) are becoming increasingly widespread and influential across North Carolina. Both have become national, award-winning models of what government can do to support young children, families and

caregivers. For example, in the past five years, Smart Start has grown from a good idea being explored by twelve pilot sites to a public/private partnership that now reaches young children in all 100 counties of North Carolina. Similarly, T.E.A.C.H has improved both the child development knowledge of, and the compensation for, 4,175 child care providers (affecting 75,377 children) scattered among every NC county during the last fiscal year. Smart Start is described in detail later in this publication, while the T.E.A.C.H program is briefly discussed in the Data Definitions and Explanations section.

These initiatives potentially can benefit all young North Carolina children. However, they have been particularly beneficial to the development of young children growing up in working poor families. The ever-increasing number of working families helped by publicly-funded child care subsidies (including subsidies funded through Smart Start), has made the difference for parents by allowing them to hold onto their jobs and for children by improving child care quality. In fact, good quality, accessible, affordable care is crucial to the success of many other public sector initiatives, such as "Work First." Work First is North Carolina's primary cash assistance program for low-income families with children. As recipients of Work First assistance, families are subject to several requirements and in return can receive cash payments and services to help the parents obtain employment.

What Is NOT KNOWN About Early Education

The biggest knowledge gap in the area of early education involves the majority of infants, toddlers and pre-schoolers who are not part of any state-regulated child care arrangement. Of the approximately 618,000 NC children ages birth through five in 1998, about 405,000 were not receiving any state documented out-of-home care. The early education data in this book are heavily skewed toward the nearly 213,000 children in some recognized form of out-of-home child care because these are the only children on whom early education data are collected. Additionally, as mentioned before, data that track quality of child care services and child outcomes such as school readiness, are not currently available.

among our children. A variety of advancements in medicine (such being. Unhealthy children must struggle hard to thrive physically and intellectually. Children need to be healthy to be able to face Health is the most basic building block for children's overall well the challenges of growing and learning. In recent decades, North as neo-natal intensive care units), improved legislation (such as other vaccine-preventable diseases now are all but non-existent preventable illnesses, injuries and death. For example, in 1997, there were no cases of polio throughout North Carolina — and Carolina has moved forward in protecting young children from preventive care for children and increased pre-natal visits by pregnant women have contributed to the improved health of aws mandating seat belts and child safety seats) and better today's young children.

dramatically reduces the incidence of birth defects, ranging from reducing the incidence of birth defects. For example, it now has been proven that getting an adequate supply of folic acid (from bearing age. In recent years, researchers and practitioners have health status and behavior of North Carolina women of child-Additionally, there is a lack of data about the preconception highlighted preconception health as extremely important in food or food supplements) before babies even are conceived cleft lips/palates to serious neural-tube defects.

Economics and Family Structure

If we are to understand the environment of North Carolina's youngest children, we need a picture of their economic and family life. The economic realities of a child's life affect that child's future opportunities and can be linked to access to quality services such as health care and early childhood education. Additionally, the structure and stability of a child's family also play a major role in the overall well-being of the child. In many ways, economic and family structure indicators inter-relate with several of the other indicators in this report (as well as one another). For example, single parents are more likely to be poor. Teen mothers are more likely to be singles can afford to live in communities with better child care centers and in general have more resources to put toward their children's development.

Similar to the data presented on early education, the economic and family structure indicators are indirect measures of children's well-being. They describe factors that *might* affect children's outcomes, but are themselves not direct measures of outcomes such as school readiness or health. Specifically, they do not show the outcome of variations in income, poverty levels or foster care. Instead, they help describe the overall economic state of this age group of children and the family traits that may influence their development.

And the second and a second and

If we are to understand the environment of North Carolina's youngest children, we need a picture of their economic and family life.

What Is KNOWN About Economics and Family Structure
The data in this section provide descriptive statistics on income
and an overview of utilization of public services by families with
children birth through five. The income of North Carolina families
is presented in a few different ways including median family
income, the average income of different family types and the
hourly wages needed for a family to be self-sufficient. The data
also disclose how many children birth through five live in poverty and in low-income families whose parents access government
assistance. In 1998, 50,000 children ages birth through five were
receiving Work First benefits that also include health care. And in
most counties, children ages birth through five made up 50% of
the entire child Work First population. In the same year, over
96,000 children ages birth through five lived in households
eliqible to receive food stamps.

The data concerning family structure reveal the frequency of births to single and teen mothers. In North Carolina, over 32% of the children born in 1997 were born to single mothers. In that same year, over 15,000 babies were born to teen (age 15–19) mothers. Finally, a measure of the number of children in foster care as a result of abuse and/or neglect is also included in this section.

What is NOT KNOWN About Economics and Family Structure Ihe data regarding economics and family structure are lacking in two ways: 1) many data elements are not collected regularly and therefore hamper our ability to provide a richer picture, and 2) the overall affect of these variables on the cognitive, physical, and emotional development of young children is not known.

First, our ability to report family income and structure for this age group of children is limited by the frequency with which these data are collected. Census data, gathered every ten years, are the most comprehensive source of information about population, family composition, and income. Because we want to report information about children birth through five living in single and dual parent families and the relative income levels of these families, we must use the 1990 Census data. These data reveal

that single parents, on average, have much lower incomes than two-parent families.

Second, there are no data collected in North Carolina that directly and convincingly reveal what young children actually experience as a consequence of their economic or family circumstances. What none of the available statewide data answer directly and clearly is the fundamental question: to what extent and in what specific ways does family income and family structure impact the developmental outcomes of North Carolina's young children? There are many national studies that shed light on this subject, but there are still no solid statewide, county or community data available.

The Context and Limitations of this Document

Assessing the Needs and Resources for North Carolina's Smart Start Population is the response to the NC General Assembly's mandate to conduct a "Smart Start needs and resources assessment." Other work is being carried out to augment and enhance future needs and resources assessments through a contract with the North Carolina Partnership for Children (NCPC) and through a NCCAI subcontract with the Frank Porter Graham Child Development (FPG) Center at the University of North Carolina, Chapel Hill. The North Carolina Partnership for Children has selected ten Smart Start partnerships to pilot new data collection efforts. NCPC is hopeful the new data and lessons learned will strengthen future needs and resources assessment. FPG is designing a more ideal early childhood data collection system and outlining how it might be possible to move towards a better system. The remaining work of both projects is anticipated to be completed by July 1999.

The report you have in your hands was never intended to be an evaluation of Smart Start, nor of the local partnerships that are implementing Smart Start initiatives in all 100 NC counties. Large-scale efforts to both monitor and evaluate Smart Start and the local partnerships are already in place and have been underway for years. This book is a review of existing information and the most current data available that is salient to measuring children's well-being.

Many of the limitations of the current data have been mentioned already, or alluded to in this overview. Although the data shed light on the state of child well-being in North Carolina, there are gaps in our knowledge. Simply put, the data just do not exist to answer all the questions we have about children in this state. Some of this may be explained by the fact that while the early years of a child's life are critical to their later success, this is also the most "private" part of their lives. So we are left many times with more questions than answers.

Finally, we encourage readers to take the time to study the background information contained later in this document, in the section entitled "Data Definitions and Explanations." Doing so will enable readers to make legitimate use of all the statistics contained in Assessing the Needs and Resources for North Carolina's Smart Start Population. Readers are also welcome to contact NCCAI for further information or clarifications of the data found here.

History Description of Smart Start

regar

he early years of a child's life are now widely regarded by scientists and child development specialists alike as the most critical for

school success and a productive adulthood. In this period of early childhood, from birth through five years, profound changes take place in language, social skills, and cognitive development; particularly, when a child's environment is rich with learning opportunities. Stunning discoveries in the last decade about the neural connections necessary for the brain to operate have provided conclusive data that a child's daily environment and experiences (nurture), rather than heredity (nature) alone determine his or her early development.

Rationale & Premise for Smart Start

There was is key to remaining competitive in a global economy. There was development of an early childhood initiative called Smart Start, and families living in poverty continued to affect the economic a growing awareness in the business community that education greater recognition among business leaders that employee procoping effectively with the obligations in their personal lives, As North Carolina entered the 1990's, the implications of the brain research and several other factors gave impetus to the economy in North Carolina that demanded new strategies to ductivity, morale and retention are tied directly to workers like child-rearing. There was the dichotomy of a booming

near the bottom nationwide in test scores. And finally, there was ment of the state's educational system, which historically ranked North Carolina as a means to promote high-quality care outside the need to address the standards of licensure for child care in the home for young children before they enter kindergarten.

As a result of these and other pressures, a new urgency to invest school readiness arose. New attention to the importance of the in early childhood activities to promote optimum learning and early years presented a challenge for parents, educators, and policymakers in North Carolina.

initiative to "ensure that children enter school healthy and ready and development services. The economic future and well-being of should have access to, high-quality early childhood education Hunt Jr. organized a task force around early childhood issues In an attempt to address this opportunity, Governor James B. to learn." The authorizing statute (Article 3 of Chapter 143B) passed in July 1993 by the NC General Assembly was entitled before taking office for his third term in 1992. Out of these "Early Childhood Education And Development Initiatives." It included the vision that "every child can benefit from, and discussions, Smart Start was created as an early childhood the State depend upon it."

chance. Often, the socio-economic status of parents, or the places children live, or their access to medical care have created barriers to an equal chance to be successful. Smart Start's vision was that door ready to succeed. Historically, not every child has had that whether a child lives in a rural or urban area of North Carolina, married couple, is in care outside the home or raised by grandtheir early years to enable them to realize their full potential. Smart Start's goal is that every child reaches the kindergarten has parents that are rich or poor, is born to a teen mom or a would have access to the services and resources they need in parents should not matter. Through Smart Start, all children

local communities to create and enhance a statewide infrastruc-Smart Start was set up as a partnership between the State and ture of early childhood resources that focus on improving child

care, enhancing preventive child health services, and supporting parents in their child-rearing responsibilities.

As Governor Hunt said, in a speech before the National Governor's Association in 1995, "The most important thing we can do to build a better future is to invest in our children ... Investing in good early childhood education is the foundation for successful, healthy children and a healthy economy. It is also the foundation for better schools, less juvenile and adult crime, fewer teen pregnancies, smaller welfare rolls, and a better workforce." The North Carolina General Assembly supported this vision and made it a public priority by passing the Smart Start legislation in 1993 and appropriating funds to make this vision a reality.

History & Development of Smart Start

The 1993 legislation established a state-level nonprofit organization, the North Carolina Partnership for Children, Inc., (NCPC) with a mission to develop a comprehensive, long-range strategic plan for early childhood development and to find ways to provide, through a public-private partnership, services to children and families. It charged the NCPC with oversight of 12 local demonstration projects. These first 12 "pioneer" sites were to be located in each of the congressional districts and each was to be a new, private, local nonprofit, 501(c)(3) organization with the responsibility for developing a plan for services to children and families in their service-delivery area.

The original legislation in 1993 also designated the State's Department of Human Resources (NCDHR) — now the Department of Health & Human Services (DHHS) — to administer the Smart Start program and report quarterly to the General Assembly through its Joint Legislative Commission on Governmental Operations on the results of the local demonstration projects. The Department's responsibilities included the development of a statewide selection process for the first 12 sites, a needs and resource assessment for each of the 100 counties in North Carolina, administration of funds and contracts, and the provision of technical assistance to those demonstration sites. Each local partnership and the NC Partnership for Children were subject to review and audit by the NC State Auditor and were required to adopt the Open Meeting Law and the Public Records Law.

Smart Start was created as a locally-driven model, loosely based upon the "re-inventing government" approach, in which higher levels of government establish performance-based outcomes and then allow local communities flexibility and autonomy in devising means to attain them. The 1993 legislation contained language stating that, "It is the intent of the General Assembly that communities be given the maximum flexibility and discretion practicable in developing their plans" for young children. As such, communities were charged to come together and plan to meet the needs of young children and their families.

Smart Start set out to level the

playing field for all children so that

every child reaches the kindergarten door healthy, alert and motivated.

"It is the intent of the General Assembly that communities be given the maximum flexibility and discretion practicable in developing their plans" for young children. As such, communities were charged to come together and plan to meet the needs of young children and their families.

should be used within three broad categories: child care services; of their State allocations ... to meet the needs of children below early years of a child's life through services providing child care, poverty and their families" (1993 Legislation.) It delineated the Start was crafted to be a comprehensive approach to impact the The aggregate administrative costs were limited to 8% or less of the total Smart Start grants to counties. By legislative mandate, on to emphasize that "they shall devote an appropriate amount family-centered services; and other 'appropriate' services includ-Smart Start allocation each year. The local grants to community-based organizations that directly serve General Assembly each year, Smart Start counties receive a addressing specific community needs.

Smart Start's Comprehensive Approach

North Carolina has taken a holistic approach to serving the needs early years. While specific programs differ from county to county, Smart Start funds support local programs and services that focus of children through its Smart Start program. It recognizes that on young children in five core categories. These five areas are: services must touch all facets of a child's environment in the

- Child Care Quality improving the quality of child care and early childhood education
- Child Care Availability making child care and early education available to every child who needs it
- Child Care Affordability making child care and early education affordable to all families
- Health giving each child access to comprehensive health care
- resources they need to support the emotional, intellectual and Family Support — getting families the information and physical development of their children.

To early childhood experts, there are four key components of **quality**, out-of-home care that will most benefit young children:
1) low child-to-teacher ratios, 2) small groups of children,
3) staff that is well trained and educated, and 4) workers that stay in their jobs long enough to form stable bonds with children. Smart Start focuses on ways to enhance the quality of child care by influencing these same components. Local partnerships may offer incentives to child care programs that work to obtain a higher level of licensure; or pay for teacher training in CPR, First Aid, or playground safety, or support increased compensation to

a child care provider tied to education level and length of stay at

Programs to make child care more available address the supply of care in a community. It may mean support of transportation initiatives to help parents get their children to child care. It might also mean funding incentives to get child care programs to offer specialized types of care not currently available or in short supply, like infant-toddler care, emergency/sick care, or programs for children with special needs.

"The most important thing we can do to build a better future is to invest in our children ...

Investing in good early childhood education is the foundation for successful, healthy children and a healthy economy. It is also the foundation for better schools, less juvenile and adult crime, fewer teen pregnancies, smaller welfare rolls, and a better workforce."

Governor James B. Hunt, Jr.
 National Governor's Association

Helping make early childhood services more *affordable* is a major focus of Smart Start. In 1996, 67% of all women in North Carolina worked outside the home. With the average fee of \$400 a month per child, affordable child care is critical to the economic stability of families. The cost of care generally determines the choices parents make for their children and sometimes is put above considerations of the quality or appropriateness of care. In addition, higher quality care is more expensive because there are more and better trained staff per child. Families at all income levels struggle to pay for the care of their children that allow the adults to go to work or attend school.

Smart Start provides tuition assistance programs that help families afford child care. By law, a minimum of 30% of a local Partnership's Smart Start allocation must be used to assist, or subsidize, parents with these child care costs. These funds supplement other funding streams in the community, particularly state and federal subsidy funds distributed through local departments of social services. Other funds may come from businesses that offer employees child care in the workplace or partial payment for the care of dependents as a part of their benefits package. A few businesses may purchase slots for employee children at particular centers.

As child care is increasingly recognized as a major link between welfare and work, more and more Smart Start funding is allocated for child care subsidies to low and moderate income, working families. Smart Start has helped to reduce the waiting lists for child care in many counties. While ensuring that child care is affordable for all children is a top priority, subsidizing child care also presents a unique opportunity to help improve the quality of care by tying subsidy dollars to the care that the parents purchase.

Health and safety programs funded with Smart Start fill gaps in child health care services. In some counties, there is a sufficient supply of both health providers and services, but consumers are unaware of or cannot access them. Other counties face shortages in health programs due to their remote location or inability to attract qualified providers. Ultimately, school readiness depends upon the healthy development of young children and early detection of health-related problems.

Smart Start supports parent education regarding the importance of early preventive health care. Smart Start has provided funding to purchase health and dental equipped vans with a nurse and dentist to go into under-served areas to provide health screenings and immunizations. Vision and hearing screening programs conducted in child care centers have pinpointed problem areas in children long before they reach kindergarten.

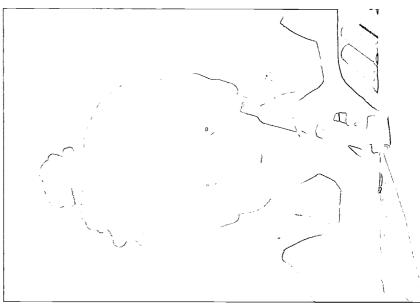

One of the most significant developments for children has been the recent introduction of North Carolina Health Choice. This health insurance benefits package is now available to NC children in working families earning up to 200% of the federal poverty level, but ineligible for Medicaid. Many Partnerships secured private monies to blend with Smart Start state funds to provide outreach to thousands of uninsured children and to enroll them in Health Choice.

Family support programs are the fifth core service provided through Smart Start. Studies have shown that children who have not received sensitive, responsive, adult care, are more likely to have lower levels of school achievement, require special education by grade 3, exhibit more behavioral problems, and use drugs and alcohol during adolescence. Teen mothers, parents with less than a high school education, and parents in an abusive or violent relationship may be unable to provide the appropriate nurturing to their young children.

Smart Start programs provide support to families with young children through parent education, home visit programs, education on what to look for when choosing care, and family literacy programs. Family resource centers have been successful models for addressing the multiple needs of at-risk families through the collaboration of different services in a "one-stop shopping" process. Many examples of family resource centers can be found. A vacant school building renovated to house a child care center, county health and social services, a parent education and resources library, and training center for child care providers is one example. In some counties, Smart Start funds enable family centers to start up in public housing units, in neighborhood

community centers, and other spaces where parents and children come together.

Getting information to parents is another crucial area that Smart Start has been able to influence. AT&T has partnered with Smart Start statewide to develop the Parent Resource Line, an 800 number that links callers to appropriate early childhood information and provides professional staff to answer parenting and child development questions. This service also directs callers to resources in their local communities. Many local partnerships join with the child care resource and referral agency in their county to train child care providers and educate parents on their choices for child care.

One of the hallmarks of the Smart Start initiative is its vision for communities to work together for the future of their was one of the founding principles of Smart Start and has been one of its greatest strengths.

457

ERIC

Collaboration & "Partnerships" Within the Community

One of the hallmarks of the Smart Start initiative is its vision for communities to work together for the future of their children. Collaboration was one of the founding principles of Smart Start and has been one of its greatest strengths.

The make-up of the local partnership board of directors has continued to offer an unprecedented opportunity to bring together elected officials; directors of human services agencies; public school, university and business leaders; providers of child care; parents who are working or receiving welfare assistance; clergy; health professionals; and volunteers involved in early childhood activities.

In the first two years of Smart Start, partnership boards participated in intensive training on collaboration and strategic planning under a contract supported by a legislative appropriation. County teams came together for three-day sessions quarterly to discuss strategies and learn ways to enhance services to children that are less duplicative, more effective, and use resources more efficiently. Through this training, local partnerships learned that successful collaboration requires broad leadership, a shared vision, strategic planning, networking, and integration of services within a community.

This emphasis on collaboration has improved many relationships among local agencies within a county. It has meant that community agencies come together to deliver services to families in a less fragmented way. Service providers now look for ways to coordinate with other agencies and make the service delivery more "seamless" for families. Because all the partners are at the Smart Start 'table' and making decisions on the limited funds to meet the needs in that community, communication and innovation is happening. Partnerships' decisions on funding often include incentives for local providers to bring collaborative approaches to their proposals.

There are countless examples of collaborative relationships occurring throughout the state among nonprofit organizations, public and private organizations, and public agencies. As a result of Smart Start, schools, Head Start, hospitals, community colleges, housing authorities, chambers of commerce, United Ways, and others are working more closely together to blend public and private resources and expertise. Just a few examples are:

- Down East Partnership in Rocky Mount brought together several agencies serving children under one roof in a renovated school building. Located together in a family resource center are satellite offices of the county social services, mental health, and health departments; a model child care center with training facilities and equipment on loan for child care providers; and the partnership's office and library.
- In Forsyth County, the Smart Start Partnership and Chamber of Commerce collaborate with the child care resource and referral agency to provide outreach and assistance on child care to businesses. Called "Forsyth Family Focus," this collaborative program offers information on work/life policies and procedures supportive of families for the workplace which businesses can institute and implement.
- and develop a 'seamless' system for delivery of child care subsidies. Instead of parents going to five separate organizations in five different locations within the county to apply for assistance, Smart Start got all the parties to participate in a shared, "one-stop shop" model. They found a way to blend resources, paperwork, and staff to review requests and deliver needed services and subsidy funds to parents.

))

တ

Evaluation & Monitoring of Smart Start

The 1993 enabling legislation called for a formative evaluation on process and efficiency issues, and for a summative evaluation focusing on the ultimate effectiveness and outcomes produced by the program. A formal, statistical evaluation of Smart Start is done by the Frank Porter Graham Center for Child Development at the University of North Carolina in Chapel Hill. The UNC Smart Start Evaluation Team at Frank Porter Graham Center (FPG) has produced 17 narrative reports to date on various aspects of this initiative.

Monitoring of Smart Start occurs in many ways. The NC State Auditors Office tracks and conducts extensive annual audits for each local partnership and the NC Partnership for Children. This work ensures the fiscal accountability for all public and private funds going to Smart Start. This fiscal tracking and auditing includes:

- all business and other private contributions
- the number of volunteer hours and other in-kind donations
- all public dollars sent from the state to the local nonprofit partnerships
- all funds awarded to local community agencies and organizations by the local Partnership Boards for services to young children and families.

Contract monitoring occurs at both the state and local level with competitive bidding practices, established contracting procedures, and requests for funds based upon actual expenditures. Accountability for performance is also monitored through the annual plan review process and with outcome data reported quarterly to the state.

Challenges & Achievements of Smart Start

Smart Start is working1:

- It has increased the number of child care spaces in North Carolina by more than 33,500 since 1994.
- More than 50,000 families who couldn't afford to pay the full cost of care are now receiving subsidies.
- More teachers are remaining in classrooms longer to provide more consistent care because of projects supported by Smart Start.
- More than 60,000 parents have received parent and health education through a variety of Smart Start programs.
- More than 97,000 children have been screened at an earlier age to prevent long term health and developmental problems.
- Fragmented services for children are being reduced and an infrastructure of services for children and families is being created in all 100 counties.

The vision that all children will receive early and appropriate care to help them reach their full potential is gradually becoming a reality across the state of North Carolina.

Smart Start is a nationally-recognized early childhood initiative. It has been awarded a two-year grant from the Carnegie Corporation in New York as one of 16 programs nationwide to be a part of their "Starting Points: State and Community Partnerships for Young Children." It has been showcased by the National Governors Association Center for Best Practices, and put North Carolina onto the Working Mother Magazine list of the most innovative states for child care. Just recently, Smart Start was named one of 10 national winners of the prestigious Innovations in American Government Awards, sponsored annually by Harvard University's John F. Kennedy School of Government and the Ford Foundation.

This section provides background discussion of the definition of all data elements, and year the data data presented, as well as the source, precise represents.

Demographics

demographers. The data are basically sound, although rural communities as well as among the homeless and count of every person in North Carolina. Between the In Census years, population numbers (derived at the undercounting, particularly in low-income urban and beginning of each decade) reflect an actual census decennial censuses, the population figures are estimated by North Carolina's government there have been on-going concerns about migrant populations.

Number of children, age 0-5

Number of persons from birth through five years of age residing in the county or state at the time the data were projected.

Source: NC Office of State Planning

Year: 1998

Percent of children, age 0-5

Percentage of the total number of persons residing in the state whose ages are from birth through five years old. Source: Calculated by the North Carolina Child Advocacy Institute (NCCAI) using data from NC Office of State Planning

Year: 1998

Early Education

section of this report are not direct indicators of child well-being in that they do not measure the outcomes of child care programs. Instead, these indicators are primarily descriptive in nature and tell us how many taken care of, and limited information about quality. children are being served, where children are being The indicators presented under the early education

CHILD CARE ARRANGEMENTS AND ENROLLMENT

North Carolina Division of Child Development: 1) if three or more related to the provider and; 4) if three or more children do not care centers and large family child care homes) must obtain an icensed child care centers. Child care centers (including child children are cared for at one time; 2) if care is provided more 'A" or "AA" license. Please see Appendix for full requirements. arrangements are either regulated family child care homes or Child care arrangements are required to be regulated by the than four hours a day; 3) if three or more children are not live where the care is provided. Regulated child care

Total number of regulated child care arrangements

The total number of child care arrangements in the state/county that are regulated by Division of Child Development, NC Department of Health and Human Services. This includes all regulated family child care homes and all licensed child care centers.

Source: Division of Child Development, NC Department of Health and Human Services

Year: July 1998

Regulated family child care homes

The number of family child care homes regulated by the state that provide care for no more than five children at one time.

Source: Division of Child Development, NC Department of Health and Human Services

Year: July 1998

Licensed child care centers

The number of licensed child care centers that care for more than five children. Licensing as a center is required when six or more children are cared for in a residence, or when three or more children are cared for in a building other than a residence, e.g., a workplace or shopping mall, as well as free-standing child care centers.

Source: Division of Child Development, NC Department of Health and Human Services

Year: July 1998

"A" license child care centers* "AA" license child care centers* **Source**: Division of Child Development, NC Department of Health and Human Services

Year: July 1998

*See Appendix for a complete explanation of the requirements for "A" and "AA" licensed centers.

Religious sponsored programs

The number of child care programs sponsored by faith based organizations such as churches, synagogues or mosques which choose to operate under a Notice of Compliance rather than a license.

Source: Division of Child Development, NC Department of Health and Human Services

Year: July 1998

Child care centers with temporary, provisional or other type of license

Temporary licenses are granted to a new center as it completes the requirements for licensure or if there is a change in ownership. A temporary license is given for no longer than 90 days. Provisional licenses are given to a center when the program has not met the child care rules or has had a serious violation more than once. A provisional license allows the child care provider to fix the problems in their program. "Other" includes probationary and special provisional permits, which are given to centers that have also violated child care rules. Generally, these licenses are given when there is a history of violations, multiple violations have occurred, or when there is a substantiation of child abuse or neglect in the center. Under certain circumstances, a special provisional license also prohibits the center from enrolling (without prior permission) any new children in their facility.

SERVICES FOR CHILDREN WITH DEVELOPMENTAL DISABILITIES

In North Carolina, young children with developmental disabilities are served through the Department of Health and Human Services (DHHS) and the Department of Public Instruction (DPI). DHHS' infant/toddler program provides early intervention services for children, birth through two years of age, who exhibit developmental disabilities or delays, emotional/behavioral challenges, or who are at high risk of having such problems.

The Department of Public Instruction serves preschool children ages 3, 4 and 5. All 117 Local Education Agencies (LEA) provide services for eligible 3, 4 and 5 year olds who reside in their school district. Services are provided in private preschools, child care programs, homes, public school buildings, Developmental Day centers, Head Start, state-operated programs and community and four year colleges and universities. These data do not capture the entire universe of children with disabilities, only those who receive services through DPI or DHHS. Both of these state agencies estimate that there are many children who are eligible and who could benefit from such services, but who remain unserved because of insufficient funding, lack of appropriate staff/facilities, or other barriers to effective access. The indicators in this section provide descriptive data on the number of children being served in these programs.

PUBLICLY SUBSIDIZED CHILD CARE

Many of North Carolina's working poor families receive government subsidies to help pay for child care. Subsidies are designed to afford children from low to moderate income working families the same opportunity to attend quality child care centers as those from higher income families. A caring and dynamic child care environment is important to all children, but may be particularly important to children from disadvantaged families.

Similar to the data on child care arrangements, much of the data about subsidized care are primarily descriptive. It does provide a picture of how many children are receiving subsidies, source of the subsidy, and what type of care parents with subsidies are choosing. Again, the arrangements where children are served offer some clues to the quality of care being used by this group of children. The number of subsidized children served in homes not regulated by the state in any form raises significant concerns about quality and safety.

Just as important, if not more important to this group of children, is the effect waiting lists have on accessibility to child care. When demand for care outpaces funding, children are placed on a waiting list.

Children receiving subsidized care

The number of children receiving federal/state subsidized child care through initiatives that assist eligible families. Children may receive subsidized child care to support employment, training, or

collected by any agency or organization across North Carolina. For multi-county organizations, the count of children served may not education. Children may also be eligible for subsidized child care egories of children served include the number of children receivsubsidies to pay for child care. However, non-governmental data First assistance, children served with Smart Start funds, and all are not included here because these data are not systematically be as precise because the state agency collects data by grantee, for child protective, child welfare or developmental needs. Catother children. There are other sources of subsidized child care ing child care subsidies who live in families that receive Work across NC. For example, some businesses give their employees counties receiving these subsidy funds through intermediary, not by county.

HEAD START

Head Start is a national, federally-funded program developed in the early 1960s through which preschool children (primarily children ages three and four and in some cases five year olds) from low-income families develop a wide range of school-readiness skills. Studies show that Head Start programs have positive short-term effects on school achievement. Parent involvement is a hallmark of Head Start. Information on the number of North Carolina children served by Head Start and the which low-income children have access to this enhanced quality early education opportunity.

PROGRAM ACCREDITATION AND CHILD CARE PROVIDER TRAINING

As mentioned in the previous section, licensing attempts to ensure quality child care by setting standards for certain components, such as child to staff ratios, education level of teachers, and curriculum. In addition to licensing, child care program accreditation and provider education also serve to improve and ensure quality.

783

The National Association for the Education of Young Children (NAEYC) houses the National Academy of Early Childhood Programs which sets standards for quality for child care arrangements. Early childhood programs (child care center, preschool, etc.) voluntarily apply for accreditation by NAEYC. Similarly to NAEYC, the National Association for Family Child Care (NAFCC) also sets standards for quality family child care providers and offers accreditation. Family child care providers voluntarily seek accreditation by NAFCC.

The T.E.A.C.H. (Teacher Education And Compensation Helps) program, started in 1993, encourages child care providers to obtain more education by providing scholarships and enhanced wages to those who participate. T.E.A.C.H. is designed to raise the knowledge and skills of child care providers, promote professionalism among (and professional recognition of) people educating young children, and encourage increased pay and benefits that will attract and retain these early educators. Child care centers sponsor a T.E.A.C.H. participant to receive additional education at a community or college. T.E.A.C.H. participants agree to stay at center for two additional years after their education is complete. This educational opportunity improves teacher knowledge and skills and adds to the quality of a child care center. Currently, over 75,000 children in North Carolina are served in a facility with a T.E.A.C.H. recipient.

The Child Development Associate (CDA) National Credentialing Program is funded by the U.S. Department of Health and Human Services, Administration on Children, Youth and Families and administered by the Council for Early Childhood Recognition. The CDA credentialing program focuses on the skills of early care and education professionals. It is designed to provide performance-based training, assessment, and credentialing of child care staff, and family child care providers. Teachers who have successfully completed an intensive CDA assessment are awarded the CDA credential signifying that she or he has the skills to meet the specific needs of children and to nurture children's physical, social, emotional, and intellectual growth in a child development framework. Currently, 2,000 providers in North Carolina have this credential.

ERIC AFILITION OF THE PROPERTY OF THE PROPERTY

Percent of kindergartners with untreated tooth decay

The percentage of kindergarten-aged children who were screened by the Division of Dental Health and had untreated tooth decay during the 1996–97 school year. State and locally-employed dental public health staff conducted this screening of children enrolled in kindergarten in the 1996–97 school year. Although the goal was to check every child, because of absences and other circumstances about 80% of all kindergarten children actually were screened in the state. The percent of all kindergarten children screened varies by county. In addition, some counties did not have an adequate number of public health dental hygienists to gather the data and therefore the information is not available for some counties.

ACCESS TO HEALTH CARE

Access to health care is essential to securing preventative care as well as emergency care for children. Preventing problems before they occur, or catching problems before they worsen, ensures healthier children. Untreated illnesses may develop into severe problems that affect a child's development. Access

involves both the availability of a regular source of care and the ability of the child's family, or someone else, to pay for it.⁵
Insurance coverage is a likely predictor of access to care (although it is known that just because a child does not have health insurance does not mean they won't get needed medical attention or vice versa). While being uninsured does not mean all these children lack access to any health care (for example, through a hospital emergency room), it does mean they often lack preventative care, treatment for non-emergency medical needs and effective monitoring of chronic medical conditions (from asthma to poor vision and hearing). The indicators presented concentrate mainly on health coverage for low-income children.

The Medicaid program in North Carolina provides health insurance to infants with family incomes up to 185% of the federal poverty guidelines and children ages one through five with family incomes of up to 133% of the federal poverty guidelines. In 1997 the poverty threshold for a family of four was \$16,400. It is also important to note the number of children who are eligible for Medicaid coverage but whose parent(s) have not enrolled them for benefits. Issues such as lack of transportation, leave from work, or quality of care also affect whether children actually get medical attention when needed.

The estimate of the number of children uninsured includes those children who are not covered by a private health insurance policy (presumably through their parent's employer) nor are eligible for Medicaid because their parents earn too much to qualify for Medicaid but not enough to afford private insurance. While some children are uninsured because their parents voluntarily and intentionally chose not to have them covered, most North Carolina children are uninsured because their parents are uninformed about their children's eligibility for subsidized coverage, or they lack effective access to insurance, or they cannot afford the insurance to which they have access. These data include all children who are uninsured, regardless of the reasons.

A major development that will affect how to measure health insurance coverage for young children in the future was the

7.03 203

passage of the North Carolina Health Choice Program. This program, which began enrollment on Oct. 1, 1998, provides health insurance to children 0–17 who live in low-income working families who do not have health insurance, yet make too much money to qualify for Medicare coverage. The state and federal government fund this program.

SAFETY

Keeping children safe prevents injuries that can be both life threatening and affect their ongoing development. Although the indicators under this section are wide-ranging, they comprise a variety of additional information that give clues as to how well children are developing in North Carolina.

Abuse and Neglect

North Carolina's smallest and most vulnerable children who do not have the ability to stand up for themselves often suffer the greatest abuse at the hands of their parents or caregivers. Children of all ages who are abused or neglected may suffer psychological and physical consequences throughout their lives. Many youth who suffer maltreatment at the hands of adults will later act out such violence, sometimes against themselves, sometimes against others. Suspected abuse or neglect of a child is reported to the local Department of Social Services (DSS) often by a relative, medical or school personnel. Once a report is made, it is investigated for validity. If a report of abuse or neglect is substantiated, action is taken by the county and in many cases the child is removed from the home. Last year in North Carolina, over 17,000 children ages birth through six were involved in substantiated cases of abuse and/or neglect.

Car Safety

One of the simplest ways to protect a child from physical harm is Carolina law mandates that children less than 12 years old must Carolina's seat belt law during select times throughout the year. adults and children and issue citations to motorists who violate do not have a comprehensive measure of how many children are wear a seat belt in a motor vehicle, and children less than age four must ride in a correctly installed safety seat. We currently the law. We have included the "Click it or Ticket" numbers as a Program has instituted a program called "Click it or Ticket" to educate adults about the importance of child safety seats and place marker for future measurement. In 1998, the "Click it or Ticket" campaign resulted in 2,330 citations for failure to use to put them in a child safety seat while riding in a car. North riding in car seats. However, the Governor's Highway Safety Each year, during two three-week periods, checkpoints and random patrols across the state target seat belt use among seat belts in general by stepping up enforcement of North child safety seats.

Accidental Poisoning

The healthy curiosity and inability to determine potential dangers of children birth through five makes exposure to poisonous substances a particular problem for this age group. The indicator we have included offers an idea of the occurrence of dangerous accidents involving chemicals. Over 55% of the calls to the North Carolina Poison Center hotline in 1997 involved children under age six.

hild Deaths

We have reported the number of deaths to children birth through four in each county. The leading causes of death for infants are birth defects and other birth-related conditions. The leading cause of death to children ages one through five is unintentional injuries. Although these deaths are unintentional, they are also in most cases preventable. For example, suffocation, drowning and motor vehicle crashes are among the top five unintentional injuries that kill young children.

Children ages 0–6 reported as abused and/or neglected

Total number of children birth through six years old about whom an official report of suspected abuse or neglect has been made to a county Department of Social Services during the year. This is a duplicated count — meaning that some children have been reported, and counted, more than once. This is another partial explanation for the gap between reported and substantiated victims of child abuse and neglect.

Economics and Family Structure

Similar to the data presented on early education, the indicators in this section are indirect measures of children's well-being. These indicators describe factors, such as income and family composition, that might affect children's outcomes, but are themselves, not direct measures of outcomes such as school readiness or health.

INCOME

Unfortunately, our ability to report family income for children 0–5 is limited by the frequency with which these data are collected. Census data, gathered every ten years, are the most comprehensive source of information about population, family composition, and income. In the years between the census, other government surveys, primarily the Current Population Survey

(CPS), attempt to estimate population, family composition and income figures. The data from the CPS are not comparable with census data because they are based on a survey sample of 2,500 households per state. CPS data is only available on the state and national level. The CPS provides a fairly current income distribution for the entire state as well as the median income for single and two-parent families. Median means that one half of the state's single parent families earn less than this amount and one half earn more.

The most current measure of county-by-county family income in North Carolina is the median family income from the US Department of Housing and Urban Development. Although this is a measure of family income, it does not distinguish between families with children living at home, the ages of those children, or families without children. The median income gives an overall measure of the economic well-being of a county. One half of the county's population make more than the median income figure and one half make less.

The rest of the income data in this section are from the 1990 Census. Although these data are older than ideal, we think it is important to include the relative income levels of single- and two-parent families. These numbers reinforce the reality that single parent families have a more difficult time earning middle to high incomes than two-parent families. The number of single parent families in poverty also highlights the fact that poverty reaches North Carolina's single parent families in disproportionate numbers.

Child Support

Integral to the discussion of family income is an awareness of the role child support plays in the economic situation of children in single parent families. As rates of divorce and non-marital births have risen, an increasing proportion of children and their custodial parents must depend on this source of income for financial support, and suffer correspondingly when it is not forthcoming. In addition, when non-custodial parents do not support their children financially, government often assumes the

361

Ţ.

ERIC.

role of providing support in the form of Temporary Assistance to Needy Families (TANF), Food Stamps and/or other forms of assistance.⁶ According to the North Carolina Child Support Enforcement Section, each year, more than 300,000 families had an absent parent who does not pay their child support.

In this section, we report the number of children ages 0–5 who have an absent parent under court order to pay child support. This does not necessarily mean the child is actually receiving the money from the absent parent. It only means the parent is under court order to pay the support. These data reveal nothing about the extent to which child support payments are delinquent or the amount of money unpaid. Additionally, many other single parents are currently seeking child support from the non-custodial parent but a court order to claim payment has not yet been issued. Finally, although there is no way to measure this, many single parents do not file for child support and therefore financially support their child on their own.

The Self Sufficiency Standard

Medicaid or child care — or private or informal subsidies — such as free baby-sitting by relative/friend, food provided by churches welfare or other public or private subsidies. The standard defines the Self-Sufficiency Standard and its methodology see, "The Self-Wider Opportunities for Women, 1997. (Distributed by NC Equity) or local food banks, or housing shared with relatives or friends. subsidies from other sources. For a more detailed description of Sufficiency Standard for North Carolina: Selected Family Types" Opportunities for Women, Inc. It estimates the level of income This indicator reveals the relative earning power single parent minimally adequate standard of living in their county without (including paying taxes) in the regular "marketplace" without by Janice Hamilton Outtz, Jennifer Brooks and Diana Pearce, necessary for a given family type to become independent of and two parent families must command in order to afford a public subsidies — such as public housing, food stamps, what income would be high enough to meet basic needs The Self-Sufficiency Standard was developed by Wider

Median family income

Half the families in the county/state have gross annual incomes higher than this amount, and the other half earn incomes that are lower. Median income is a different measure than the "mean" or average income. These figures are the actual dollar amounts for the year reported. These data do not distinguish between families with children and those without any children present. Thus, it is more a measure of county/state economic status than a direct indicator of child well-being.

POVERTY AND ASSISTANCE

Childhood poverty has immediate and often lasting negative effects. When children are poor, it is assumed that some of their basic needs — food, shelter, and clothing — are not being met. And, when basic needs are not being met, it makes it hard for a child to thrive. Children living in families who are poor are more likely than children living in other families to have difficulty in school, to become teen parents and as adults, to earn less and be unemployed more often.8

In addition to reporting an estimate of the number of children ages 0–5 living below the poverty line, included here are a number of other indicators that measure the number of children living in low-income families that receive government assistance. The number of children receiving food stamps is a relatively accurate measure of poverty because the income eligibility level to receive food stamps is so low. Additionally, the number of

children in families receiving Work First benefits — which can include cash assistance as well as medical care — allows us another measure of single parent families throughout North Carolina struggling to provide the basics for their children. These data reveal that a large percentage of all children who receive Work First benefits and of all children who receive are between the ages of 0–5.

Children 0-5 living in poverty

The estimated number of young children from birth through age five years of age residing in households having an annual gross income falling below the federally-established "poverty line" for their family size.

Source: Estimates developed by Division of Child Development based upon 1990 data, 1998 estimates of population supplied by the North Carolina State Demographer and annual poverty projections supplied by the US Census Bureau.

Year: 1998

Children 0–5 receiving Work First benefits

Total number of children from birth through five years of age who are the intended beneficiaries of welfare payments made through Work First to their parent(s) or other adults responsible for them. In NC, Work First replaced AFDC (Aid to Families with Dependent Children) as the main cash payment welfare program for poor children in 1996. Work First funds can be and are used for more than cash payments, transportation, and employment training intended to assist welfare recipients in making the transition from welfare to work. In November 1998, the average Work First cash payment was \$215.08 per month.

Year: 1998

Number of children 0-5 receiving food stamps

Total number of children from birth through 5 who are the intended beneficiaries of the federal Food Stamp program (through which low-income adults and their children receive monthly coupons redeemable only for a certain dollar amount of federally-approved foods and other grocery items). There is not an exact correlation between the number of children living in poverty and the number of children benefiting from food stamps. The main reasons for this discrepancy are: 1) the fact that some "near-poor" families (i.e. just above the federally-established poverty line) are eligible for food stamps and 2) the reality that not all the families officially eligible to receive food stamps actually do so. Although possible, it is very unusual for the number of children living in poverty.

FAMILY STRUCTURE

The amount and quality of economic and social resources available to a child are very often determined by the number of parents living with that child. Research shows that children who live in a household with one parent are substantially more likely to have family incomes below the poverty line than are children who grow up in two parent families. Families with female head of household comprise the majority of poor families.

The most current data we have on family structure concerns the number of infants born to single mothers and teen mothers. Children of unmarried mothers are at higher risk of suffering adverse birth outcomes, such as low-birth weight, and infant mortality.¹¹ Teen mothers are, more often than not, single mothers who have even fewer resources available to them than older single adult mothers. Children born into these circumstances face large hurdles. Although the data presented about the number of children ages 0–5 in single and two parent families are from the arrangements of children in North Carolina.

608

808

a a

It should be noted that even though a mother is single, it does not mean she is raising the child "alone." These data do not reveal information about mothers who, while single, have other supportive adults in their lives such as a live-in partner, relatives, or friends who take an active role in assisting the mother in raising her child. That stated, because of the likelihood of single mothers earning less income, single parenthood can serve as one measure of the economic security of infants. It should also be noted that national data indicate a significant increase in the number of single fathers raising children. However, no North Carolina specific data currently are available about this trend.

Foster Care Placement

The final indicator related to understanding family structure is foster care placement. This indicator reveals the extent to which children ages 0–5 in North Carolina are being removed from their primary home (usually their birth parent(s)) or monitored in their home due to child neglect or abuse. In addition to the ill-effects of being neglected or abused, these children experience additional trauma when removed from their parent, homes and familiar surroundings.

or the child has been removed from the home and placed in a wide time children spend in foster care is an important issue. While DSS of Social Services (DSS) custody. This means that the child's living relatives, a group-living arrangement, foster parents, institutions, The numbers cited here are the number of children in Department arrangement has been investigated and is either being monitored placed in DSS custody most often because they are substantiated meaning that there may be children in this count that have been in DSS custody for a number of years. Furthermore, the length of allowed to live with his/her own parent(s) with DSS supervision. The court has the authority to place children in the settings and victims of child abuse and neglect. It should be noted that this or with another adult in the child's life. On occasion, a child is interests and will ensure his or her physical safety. Children are range of living options. These options include: placement with with those people the agency deems will be in the child's best number counts all children who are currently in the system,

does collect cohort data each year which tracks children as a group who enter the system for the first time, these data are not broken down into specific age groups (such as children ages 0–5). However, cohort data from 1996 shows that of all children entering foster care for the first time that year, 57% remain in DSS custody after 12 months.

Children 0-5 living in single parent families

The number of children ages 0–5 officially residing in a household with either the mother or the father but without both. It is not an indicator of the quality of the relationship children have with either parent, nor the presence of other adults in the children's households or lives. Also, this statistic does not address the many reasons why children may not reside with both parents (e.g. divorce, death or never married).
